

**Everybody with a cervix is at
risk of cervical cancer.**

**If you have a cervix and are aged
25-74, regular cervical screening
could save your life.**

Self-collection is now an option for cervical screening!

**If you are due for your Cervical Screening Test, you
can choose to take your own vaginal/front hole
sample with a swab.**

**The swab will be tested for Human Papillomavirus
(HPV). Finding HPV early will protect you against
cervical cancer.**
